Name of the subject				Subject code		Year / semester	
Strength of Materials in Civil Engineering *Wytrzymałość materiałów w budownictwie*						**II**	**01**
Subject		**Profile**		**Level of education**			
Obligatory		**General academic**		**Full-time, first degree – S1**			
Type of classes						**ECTS**	
Lecture	**Exercises**	**Laboratory**	**Project**	**Seminar**	**Exam**		
15	**30**	**-**	**15**	**-**	**-**	**6**	
Department conducting subject:	***Department of Civil Engineering*** ***Tel: +48 (34) 325 09 50*** ***mail: damian.jonczyk@pcz.pl***						
Teachers conducting subject:	***PhD. Eng. Anna Jaskot*** ***PhD. Eng. Krzysztof Kuliński*** ***MSc. Eng. Damian Jończyk***						

I. Card subject

PURPOSE OF THE SUBJECT	
C01	A basic understanding of the behavior of common structural forms, based on a physical understanding of how these forms are able to carry external forces through the development of internal forces in structural elements.
C02	The ability to derive stress and strain distributions within basic structural members.
PRELIMINARY REQUIREMENTS FOR KNOWLEDGE, SKILLS AND OTHER COMPETENCES	
1	Knowledge in the field of Classical Mechanics
2	Knowledge in the field of Engineering Mathematics (Linear Algebra and Differential Equations)
EDUCATIONAL EFFECTS:	
Knowledge: the graduate knows and understands	
EK1	conceptual links between structural and solid mechanics, concepts of designing for strength and deformation limits, how beams and frames resist external forces.
Skills: the graduate can	
EK2	determine: the internal forces in statically determinate beams and frames, the stresses within simple elements and cross-sections, deflections in simple beams.
Social competence: the student is ready to	
EK3	work individually and in team.

PROGRAM CONTENT		
Type of classes - Lecture		**Number of hours**
L1	Introduction. Review of Equilibrium	1
L2	Stress and Strain. Mechanical Properties of Materials	1
L3	Axial Load	1
L4	Torsion	1
L5	Constraints and Statical Determinacy	1
L6	Shear Force and Bending Moment Diagrams	1
L7	Moments of Inertia	1
L8	Bending	1
L9	Transverse Shear	1
L10	Deflection of Beams – Elastic Curve	1
L11	Deflection of Beams – Energy Methods	1
L12	Unsymmetric Bending. Combined Loadings	1
L13	Cross-section Core	1

L14	Buckling of Columns	1
L15	Quiz	1
	TOTAL:	**15**

PROGRAM CONTENT		
Type of classes - Exercise		**Number of hours**
E1	Introduction. Review of Forces, Moments	2
E2	Axial Loading – Statically Determinate Bars	2
E3	Axial Loading – Statically Indeterminate Problems	2
E4	Torsion	2
E5	Shear Force and Bending Moment Diagrams in Beams	4
E6		
E7	Shear Force and Bending Moment Diagrams in Frames	2
E8	Quiz no. 1	2
E9	Normal and Shear Stresses in Beam	2
E10	Deflection of Beams	4
E11		
E12	Unsymmetric Bending. Combined Loadings	2
E13	Cross-section Core	2
E14	Column Buckling	2
E15	Quiz no. 2	2
	TOTAL:	**30**

PROGRAM CONTENT		
Type of classes - Project		**Number of hours**
P1	Introduction. General Information about Project	1
P2	Review of Statics	2
P3		
P4	**Project.** Individual Assumptions	1
P5	**Project.** Shear Force and Bending Moment Diagrams	3
P6		
P7		
P8	**Project.** Normal and Shear Stresses	2
P9		
P10	**Project.** Deflection	3
P11		
P12		
P13	**Project.** Cross-section Core	1
P14	Introduction to Structural Design	1
P15	Review	1
	TOTAL:	**15**
